

# Face Coverings and Reopening

## LIKELIHOOD OF SPREAD

**Step 1:** Individuals may be contagious and spread COVID-19 without their knowledge, even if they do not have symptoms. Wearing a face cover may help prevent the spread of droplets that might be infectious. This is only effective if everyone wears a face covering.

## CA Roadmap for Reopening

**Step 2:** For a safe reopening, exposures need to be limited through conventional (hand washing) and non-conventional methods (physical distancing, face coverings). Requiring face coverings now will help create a seamless transition when the reopening of our communities begins.
